Abstract

Did you ever wonder how thoughts can affect the physical world? Where is meaning in thoughts? These questions are part of the story how metaphysics and quantum physics are interrelated at a pre-physics or proto-physical level, using primarily information concepts. These complex topics are understandable once we explore that the mind and thoughts are really quantum information supported by high dimensional quantum vibrations. These ideas are so fundamental to everything, we'll explore them by considering that God most likely used information-like mechanisms to create all behaviors we observe and experience in both quantum physics and metaphysics. Join me as we play and explore with these consciousness expanding ideas.

In The Beginning

Did God need information technology to create the universe?

Most Likely the answer is Yes! That “order” was God itself. Mechanism behind the laws, conservation, behaviors, etc

DJM 1/26/2010
What is Source of everything?

What kind of Information did God use to create the big-bang?

Quantum states = Dimensional Strands

Quantum states: source of the bit-bang (maybe a big thought!)

DJM 1/26/2010

Quantum Mind Model

Thoughts are made of the strands of source

- State space is outside of 4D spacetime
- Very high dimensional state space
- Randomness is key resource
- Quantum style orthogonal states
- Probabilistic state combination
- CDMA style computational framework
- Dimensional increase due to superposition/entanglement
- Semantic relations exist & can be constructed
- Brain/mind mapping using phase invariance (patent)
Information and Metaphysics

Start with the following extremely good presuppositions:

• Mind and brain are separate but cooperating systems – quantum mind
• Mind is informational and non-classical
• Mind has quantum-like properties (making the brain a quantum antenna)
• Mind is not limited by space and time (but more by habit)
• Thoughts/Bits can affect the physical universe as equivalent energy/entropy.
• Mind has metaphysical capabilities:
  • Remote viewing
  • Telepathy
  • Expanded awareness (NDE, clairsentience, etc)
  • Direct awareness, knowing and meaning
  • Precognition and time manipulation
• Quantum Mind model is a paradigm shift for the following reasons:
  • Quantum States and high dimensional representation for thoughts
  • Requirement for Brain/Mind interface (probabilistic exchange)
  • Recast metaphysical topics to protophysical realization
