Last Year ISSSEEM Paper:

***”Quantum Information Research
Supports Consciousness as Information”***

Introduced ideas of Quantum information

- Energy vs Information duality/paradox
- “It From Bit”, even Black Holes as bits
- Smarter quantum computation from superposition
- Biological quantum computation
- Quantum consciousness as panpsychism
- Meaning and “Age of Knowing”

Smarter than Computers

- Rethink ourselves & universe as info NOT Energy
- Space, Time and Energy limit computing
- Quantum information *smarter* than classical bits
- Biological systems evolve naturally using quinfo
- Consciousness as Quantum information ($>10^{100}$ more)

concept of
SuperMind
(term by Maurie Pressman)

SuperMind is Information

- **Information in normal consciousness**
 - Memory, awareness and intuition
 - Make decisions based on info integration
 - Language, meaning, objects and lucidity
 - Dreams as simulations/virtual reality
- **Information as supernet attraction** (examples)
 - Medical Intuition and “energy” awareness
 - Meditative states and unity awareness
 - Direct knowing, meaning and telepathy
 - Awareness/control of qustates (occult chemistry)

SuperMind is Non-Classical

- **SuperMind is non-local**
 - Morphogenesis as basis for consciousness evolution
 - Remote viewing and Astral Projection
 - Perceive non-localized state of being
- **SuperMind is atemporal**
 - Memory is temporal access of information
 - Precognition & retrocognition RV (at PEAR)
 - Timeframe based on mental state (parallelism, zone, NDE)
- **SuperMind is non-energetic**
 - Subjective states can not be made objective (measurement)
 - Lucidity and quietness from less mental noise
 - Emotion is large component of mental states
 - Consciousness can interact with quantum states

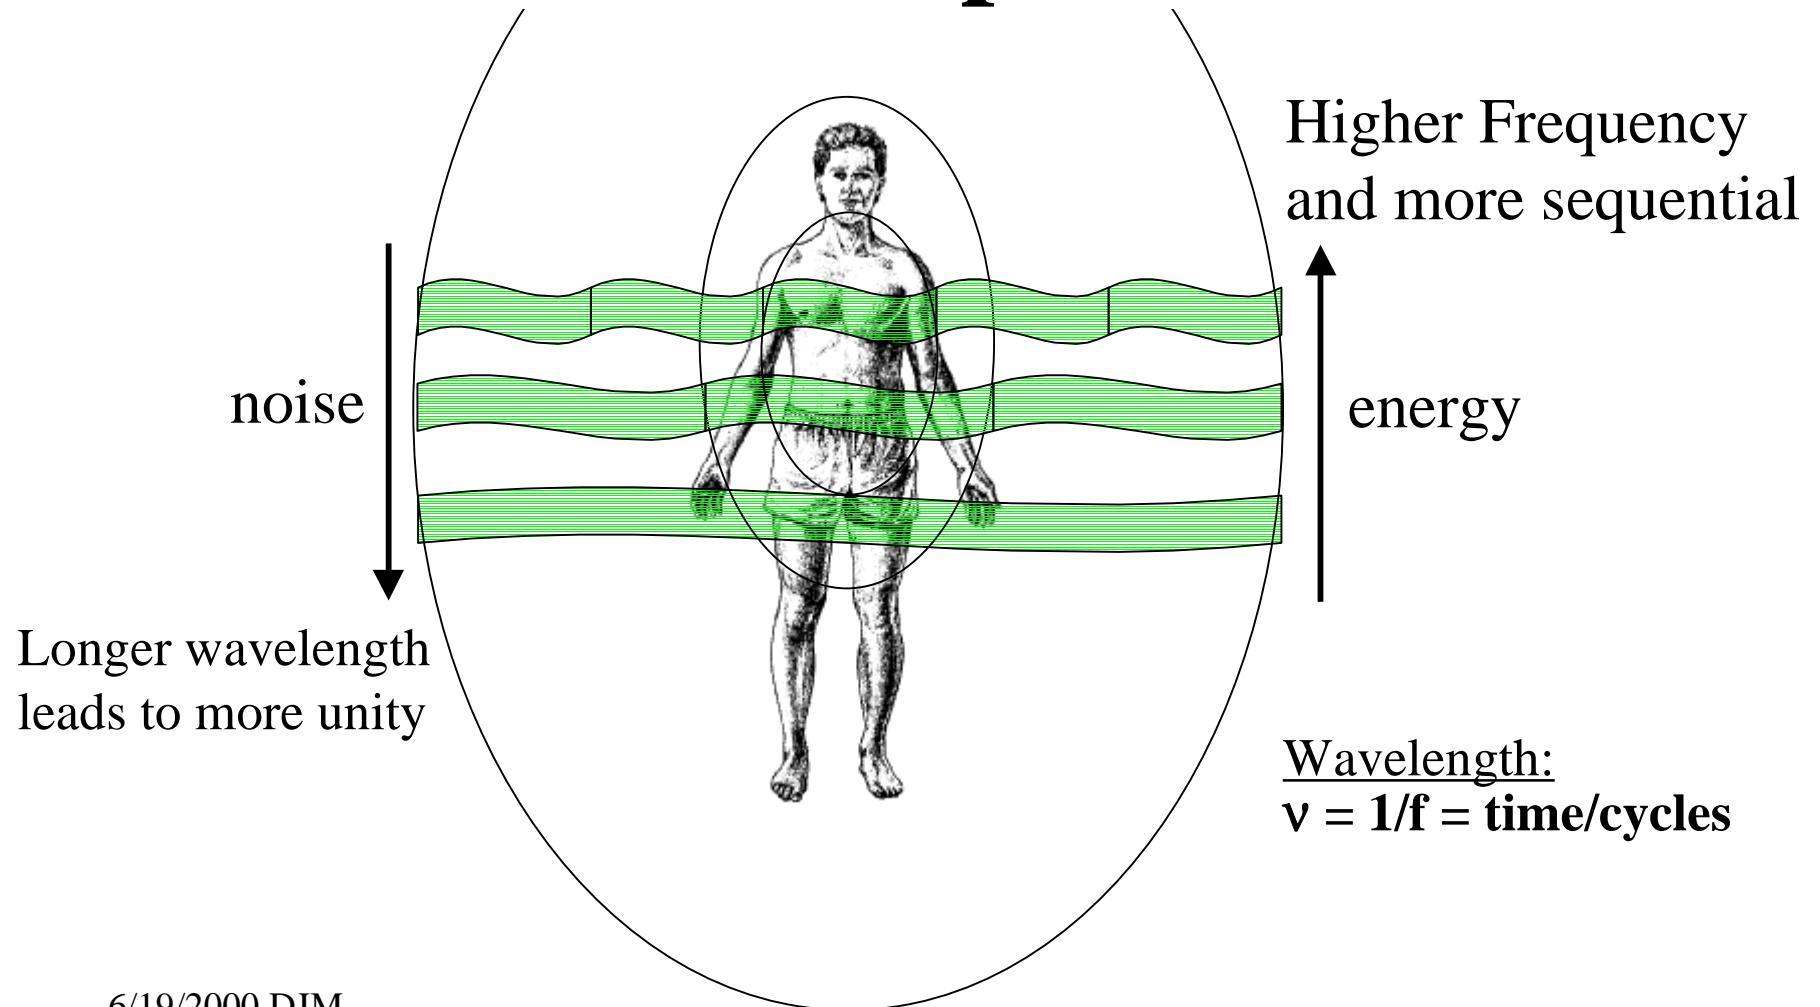

SuperMind as Quantum Computing

- **Quantum States are:**
 - High dimensional (non-local & atemporal)
 - Future probability distributions
 - Self consistent information but allows paradox
 - Not possible to block from superposition interaction
- **Mental states are:**
 - Heavily influenced by emotion (anger vs love)
 - Less energetic if lower frequency (delta, theta states)
 - Primary influence of your awareness of world
 - Can interact with quantum states (can not shield)

Meditation shifts us from Linear Spacetime

Enabling SuperMind

Remember & awaken to your higher self:

- Open chakras (heart) to love states (more info)
- Quantum states carry info, emotion & meaning
- Become like the light (less mass)
- Lower vibrational frequency (less energetic)
- Less localization of self (not your physical brain/body)
- “Remember” information you never knew
- More unity of thought (less sequential time)
- Smarter decisions (more loving information in choices)
- Your state influences others but without time nor causation

SuperMind Conclusions

SuperMind model of quantum universe:

- Subtle energy acts as quantum-like information that includes subjective meaning and emotion.
- We will soon all remember that the universe is a big quantum simulation and heart/mind is programmer
- Enabling the heart (chakra) allows us to connect to the information (or creative) source that represents all the information in the universe.
